

Flood Hydrographs v. Recreational Use Timing in the Tucannon Headwaters (PA5-15)

Tucannon at Starbuck (USGS-13344500) Daily Hydrographs by Water Year (Oct-Sep)

Note, the specific flood magnitudes may differ from Starbucks to the project area. The Starbuck gage was selected for this chart based on its extensive record length.

Tucannon Visitors by Season (with percent of visitors annotated)

Recreational use data are from an online survey (2024) put out to the public for this PA 5-15 assessment project. The specific survey question was: "What time of the year do you typically visit the Wooten Wildlife Area? Select all that apply." The online survey received responses from 64 individuals. The online survey was not rigorously developed in its structure or sampling strategy, so the resultant data are for information purposes only.

49% of the survey respondents said that camped in the Wooten Wildlife Area and vicinity, 20% said that camping was their primary activity, and 13% said that they stayed in nearby USFS campgrounds when staying overnight.
